Cabinets

Cabinets

The client do not communicate with the KeyWin server or other way around. All communication is between the SQL.
The Client only communicates with the cabinet at the detection of the cabinet(New cabinet search in KeyWin).
The Client is communicate with the SQL, not the other way around.
KeyWin server is communicating with the cabinet, not the other way around.
KeyWin server is communicating with the SQL, not the other way around.
The time synchronizing between cabinet and server is done with the ports 1433 & 1434
Following ports needs to be open:

Port 39164 (PING protocol)
Port 5432 (PostgreSQL)
Port 1433 (TCP, SQL Server 2008)
Port 1434 (UDP, SQL Server 2008)
Port 80 (For the Creone license server. This is the standard port for HTTP and are as standard always open)
